

1. How do you distinguish between `shutil.copy()` and `shutil.copytree()`?

**While `shutil.copy()` will copy a single file, `shutil.copytree()` will copy an entire folder and every folder and file contained in it.**

2. What function is used to rename files??

**`rename()` function is used to rename files.**

3. What is the difference between the delete functions in the `send2trash` and `shutil` modules?

**Delete functions deletes files or folders permanently whereas `send2trash` function will moves files or folders to recycle bin.**

4. `ZipFile` objects have a `close()` method just like `File` objects' `close()` method. What `ZipFile` method is equivalent to `File` objects' `open()` method?

**A `ZipFile` object is made by calling `ZipFile` constructor which accepts zip file name and mode parameters. We create a `ZipFile` object in `READ` mode and name it as `zip`. `printdir()` method prints a table of contents for the archive.**

5. Create a programme that searches a folder tree for files with a certain file extension (such as `.pdf` or `.jpg`). Copy these files from whatever location they are in to a new folder.
